

ASImport2CM™

Any Source Import to Content Manager

Import with Confidence

Organizations that deploy IBM's Content Manager in their enterprise often need to bring outside content and metadata into their system. SYSCOM, a world-leading provider of technologies to enable Content Manager enterprises, takes the guesswork out of importing with ASImport2CM™. With this powerful tool, images and data from literally any source can be quickly and seamlessly imported into CM.

With ASImport2CM™, import any source with confidence!

Platform Independence

ASImport2CM™ accepts images and metadata prepared as file output from any repository. It runs on Windows or AIX and will import into Content Manager on any platform, including z/OS.

No Interruptions

ASImport2CM™ will not adversely affect day-to-day operations. It will not require live access to the source repository. Rather, it imports files prepared as output from the original system.

**Every image, every bit of data.
100% Confidence.**

Single Use

ASImport2CM™ is licensed as a single use engine to import massive quantities into Content Manager. Once the migration import completes ASImport is usually no longer required.

Safety and Accountability

ASImport2CM™ comes complete with reporting and tracking facilities, as well as comprehensive restart and recovery capabilities.
