

# IP2CM™ Migration

## ImagePlus to Content Manager Migration Utility

### Think It Through

So, you've decided to move your organization to Content Manager... What about the metadata and integration work you've spent so much time and money perfecting? At SYSCOM, we know your business depends on how users and applications leverage technology. That's why we offer an ImagePlus to Content Manager Migration Utility (IP2CM™). Now, all your metadata can make the transition to Content Manager without loss or corruption, and SYSCOM can help to ensure that dependant business applications don't get "broken" in the process.

### Why Use IP2CM™?

While IBM offers a migration utility with Content Manager, it is designed only for standard FAF/FWA customers and is not easily customizable without assistance. If your organization uses a custom front-end for ImagePlus, you are faced with a choice... You can either put in considerable effort rebuilding your metadata from scratch in Content Manager, or you can employ a more powerful migration utility. With SYSCOM's IP2CM™ organizations can rest assured that the metadata, which is so vital to your work, will transition to Content Manager smoothly and intact.

### High Volume, Low Risk

IP2CM™ is capable of migrating roughly 1 million documents per hour. With this benchmark, you have the option of migrating your metadata all at once, or in phases, with minimal interruption to your users or processing capability.

### Highlights

- Support for non-standard ImagePlus front ends
- Automated component creation
- Support for phased migrations
- Support for Document Logical Copy
- Prevention of duplicate entries
- Support for "backing out" a failed migration
- Validation scripts to ensure success
- Support for migrating across Logically Partitioned Systems

### Migration Process

#### PHASE ONE – Pre-Migration Assessment

Before we get our hands dirty moving your metadata, we must be sure we understand your system fully. To that end, SYSCOM, with your help, will put together a Pre-Migration Assessment Report.

#### PHASE TWO - Migration

When the Pre-Migration Assessment Report is complete, the migration can begin. First, we prepare Content Manager to receive the metadata. Next we extract the metadata from ImagePlus. We then process the metadata as necessary, before loading it into Content Manager. Finally, we validate the migration to ensure that no errors were reported.

#### PHASE THREE – Post-Migration Assessment

Once the migration has been performed, we will demonstrate the success of the migration, and confirm that the results are in line with expectations.
